Agenda ccNSO IANA WG Telephone conference
26 March 2008

1. How do we share and report about bugs
   (is there a bug tracker ? Can we use it ?
   what is the best format to help you ?)

2. You indicate in your RZM documentation
   (Page 8.) that:
   "IANA Check:
   Each request undergoes a manual review
   by IANA staff."

   This is a blocking factor for our systematic
   testing approach since we have to wait for
   your manual verification for each request
   before going to the next test. How can we
   circomvent that ?

3. Are VGRS and DoC involved over the testing ?
   Do they know about each test request ? Do
   we need to care about any synchronisation
   with them over our the testing ?

4. AGENDA TO LAUNCH THE TESTING!

   Note that from our side we suspect that 6
   weeks sounds to be a a minimum to test
   seriously RZM (but this also depends on the
   the outcome of point "2").
