Contact Repository Implementation Working Group Call
13 June 2013

The group decided to work on finishing the document for Durban in order to present it to community.

The document should include recommendations on how to move forward. The group agreed that it would need to specify the criteria on following points:

1. The technical implementation of the repository.
2. The governance model.
3. The funding.

It was suggested that concrete cost examples already looked up by the previous working group should be used. Possible providers could also be asked for further cost details.

It was agreed that the most important criteria for the maintenance of the repository is 24/7 availability and effective management of contacts.

Antoinette Johnson and Isak Jacobsen was tasked to review the document for the presentation in Durban in order for the group to discuss it on the next call.
