Call for Presentations Hybrid TechDay ICANN 83 Prague

The ICANN Tech Working Group is again planning a technical workshop at the ICANN 83 meeting (Prague).

As the meeting will be hybrid so will be vTechDay which is currently penciled in for Monday, 2025-06-09 for blocks:

Block 1 09:00 - 10:15 am local time / 07:00 - 08:15 UTC
Block 2 10:45 - 12:15 pm local time / 08:45 - 10:15 UTC

We shall try to accommodate the time zone of virtual presenters in setting the agenda.

The TechDay workshop has been a part of ICANN meetings since 2006 and has provided a forum for both experienced and new people to meet, present and discuss technical topics related to registry and DNS work and security.

We are especially interested in:

1. DNSSEC

2. DNS Abuse Prevention and Mitigation Tools

3. Best (security) management practices, lines of defense, to protect Registries from bad actors, attacks or malware, or even reports of failures

4. Open-Source Tools that have been found helpful

  a) We would in particular like to hear about git based DNS zone management, especially simple setups usable as example for other (smaller) (cc|g)TLDs.

  b) We would also like to hear about further RDAP client implementations for the command line, devices and libraries.

  If there are enough proposals, we might have round tables.

5. In addition, we welcome suggestions for additional topics

If you are interested in presenting, please email us at

ccNSO-techday@icann.org or reply to this email.

We hope that you can join us and request that you disseminate this Request to other lists where it might of interest.
