1. Background & Introduction

1.1. Background

At its meeting on 10 December 2015 the ccNSO Council discussed the launch of the formal ccNSO Policy Development Process to address the lack of policy with respect to the Retirement of ccTLDs as well as a review mechanism for decisions pertaining to the Delegation, Transfer, Revocation and Retirement of ccTLDs.

To increase the predictability and legitimacy of decisions pertaining to the Retirement of ccTLDs and in accordance with the recommendations of the ccNSO Delegation and Redelegation Working Group (“DRDWG”) in 2011, the void or lack of policy relating to the Retirement of ccTLDs needs to be filled by a Policy developed by the ccNSO. However, at the time the DRDWG also recommended that such a ccNSO Policy Development Process (“PDP”) should be launched following the development of a Framework of Interpretation (“FoI”) [5] of Request For Comment [18] (“RFC”) 1591.

Following initial discussions by the ccNSO Council, input and feedback was sought from the ccTLD community at the Marrakesh (ICANN55) and Helsinki (ICANN56) meetings. At its meeting in Helsinki the ccNSO Council launched the ccNSO Policy Development Process 3.

Following the discussions by the ccNSO Council, feedback and input from the community and the drafting team, the Issue Manager recommended:

1. The ccNSO Council initiates one (1) ccNSO Policy Development Process to develop policy proposals for both a Review Mechanism and on the Retirement of ccTLDs.
2. [...] The initial focus needs to be on developing a Review Mechanism, which is considered the highest priority, particularly in light of the IANA Stewardship transition. Only then the focus should be on Retirement, and, if needed, revisit the Review Mechanism to include decisions relating to the Retirement of ccTLDs. To appoint two working groups each with its own charter, working method and schedule.

However, at the meeting in Copenhagen (ICANN58, March 2017) the ccTLD community present suggested to change the order in which to address the topics. Analyses showed that alternating the order would save at least 3 months and simplify the process. Effectively this meant that by reversing the order, to first develop the Retirement Policy proposals and then those for the Review Mechanism, the potential Review Mechanism would be available sooner to the community.

The ccNSO Council initiated the 3rd ccNSO Policy Development Process (“ccPDP3”) in March 2017 by adopting the Issue Report. Accordingly the ccPDP3 Working Group (“WG”) to develop policy recommendations for the Retirement of ccTLDs was established by June 2017. The Charter of this WG [3] is included in the Issue Report [1].

The ccPDP3 Retirement WG was tasked to develop policy proposals to address at a minimum the following topics and issues identified in the Issue Report:

- Consistency of terminology.
- What triggers a Retirement?
- Who triggers the Retirement process?

---

• Additional conditions for Retirement of a ccTLD?

What are the conditions for the actual Retirement of a ccTLD? Is the occurrence of a triggering event sufficient or should additional requirements be in place?

• Compliance with conditions?

Assuming the Retirement of a ccTLD is conditional, who will monitor, and who will be held accountable, if at all, if requirements are not met?

As the activities of the WG are undertaken within the framework of the ccNSO Policy Development Process, the limitations with respect to the scope of a ccPDP, specifically by Article 10 and Annexes B and C to the ICANN Bylaws [11] limit the scope of the WG's work and proposals.

Further, the ccPDP3 Retirement WG was tasked to report to ccNSO Council on topics or issues which they identified and considered out of scope for the WG. Accordingly, the Chair of the WG informed the ccNSO Council and Issue Manager that the ccPDP3 Retirement WG identified two issues, which need to be addressed, but were considered out of scope of ccPDP3:

• The ccNSO membership definition (section 10.4 (a) of the ICANN Bylaws [11]). The membership definition was changed as part of the IANA Stewardship Transition process;

• the events that would trigger the Retirement of IDN ccTLDs. The Retirement WG advised Council that the events leading to a de-selection of IDN ccTLDs should be identified under a ccPDP that also defines the selection of IDN ccTLD strings.

1.2. Introduction

RFC 1591 states:

4. Rights to Names

[...]

2) Country Codes

The IANA is not in the business of deciding what is and what is not a country. The selection of the ISO 3166 list as a basis for country code top-level domain names was made with the knowledge that ISO has a procedure for determining which entities should be and should not be on that list.

In 2014 the ccNSO through its Framework of Interpretation confirmed that RFC 1591 applies to ccTLDs.

The ISO 3166-1 list is dynamic and country codes are added and removed on a regular basis. When a new ISO 3166-1 Alpha-2 code element (“Alpha-2 code”) is added, a ccTLD corresponding to that Alpha-2 code can be added to the Root by the IANA Naming Functions Operator (“IFO”). However, as was identified by the ccNSO Delegation and Redelegation Working Group in 2011, there is no formal Policy available for the removal of a ccTLD from the Root Zone when a country code is removed from the ISO 3166-1 list of country names.

It is important to note that ccTLDs are defined as those entries in the Root Zone database identified as such, these include:

• 2 letter ccTLDs corresponding to an Alpha-2 code (the majority of ccTLDs);
• 2 letter Latin ccTLDs not corresponding to an Alpha-2 code;
• IDN ccTLDs as approved by ICANN.

2. Policy Objective

The objective of the Policy is to provide clear and predictable guidance and to document a process that is orderly and reasonable up and to, but excluding the removal of a ccTLD from the Root Zone.

3. Applicability of the Policy

This Policy applies to all entries in the Root Zone database which are identified as ccTLDs, and are subject to a Retirement Triggering Event (“Trigger”).

Retirement Triggering Events are defined as follows:

• For 2 letter ccTLDs which correspond to an Alpha-2 code
  – the Trigger is the removal of the corresponding Alpha-2 code from the ISO 3166-1 Standard by the ISO 3166-1 Maintenance Agency (“ISO 3166/MA”) [16];

• for 2 letter Latin ccTLDs which do not correspond to an Alpha-2 code
  – the Trigger is the ISO 3166-1/MA making a change (other than making that code an Alpha-2 code) to any of these. For each such Triggering Event the IFO will consider if the change requires retiring that ccTLD. If the ccTLD Manager disagrees with the IFO's decision to initiate the Retirement process it can appeal the decision using the ccTLD Review mechanism;

• for IDN ccTLDs
  – the Triggering Event will be identified in the Policy which applies to IDN ccTLDs.

For the purposes of this Policy a “Functional Manager” is the entity listed as “ccTLD Manager” in the IANA Root Zone database or any later variant, who is active with respect to the management of the ccTLD or with whom the IFO can officially and effectively communicate.

If a ccTLD is to be retired but does not have a Functional Manager the IFO cannot transfer responsibility to a new Manager according to its standard process. This set of circumstances would create a deadlock situation which would prevent the IFO from ever retiring the ccTLD. To avoid such a deadlock, and only under these specific conditions, this Policy allows the IFO to proceed with a transfer of responsibility for the ccTLD to establish a Functional Manager and insure the ccTLD can be retired. Such a transfer should follow the standard IFO Transfer process where possible.

2The ccTLDs .UK and .AC which refer to exceptionally reserved codes UK and AC are grandfathered as ccTLDs and .EU, which corresponds to the exceptionally reserved code EU, was delegated under the relevant ICANN Board resolution from September 2000 [12].
3The removal of a (cc)TLD by the IFO is excluded from the Policy, as this is outside of the policy scope of the ccNSO.
4. Retirement Process

4.1. Expectations

There is a good faith obligation for both the IFO and the Manager of the retiring ccTLD to ensure an orderly shutdown of the retiring ccTLD which takes into consideration the interests of its registrants and the stability and security of the DNS.

Note: Given the importance and exceptional nature of the ccTLD Retirement process, the IFO should, prior to sending a Notice of Removal (see Subsection 4.2), contact the ccTLD Manager and confirm who the IFO should be dealing with regarding the Retirement process. The person or role identified by the ccTLD Manager to deal with the Retirement process is referred to as the Retirement Contact and in the remainder of this document the use of the term ccTLD Manager should be understood to mean ccTLD Manager or Retirement Contact if one has been formally identified to the IFO by the ccTLD Manager.

4.2. Notice of Removal

Once the IFO confirms that a ccTLD should be retired and has a Functional Manager, it shall promptly notify the Manager of the ccTLD that the ccTLD shall be removed from the Root Zone 5 years (“Default Retirement Date”) from the date of this notice (“Notice of Removal”) unless a Retirement Plan (see following sections for details) which is agreed to by the Manager and the IFO and is in accordance with this Retirement Policy stipulates otherwise.

The IFO shall include with the Notice of Removal a document describing the reasonable requirements (“Reasonable Requirements Document”) it expects of a Retirement Plan and note that the IFO will make itself available to the Manager to assist in the development of such a plan should the Manager request it.

4.3. Setting a Date for Retirement

The IFO cannot require that a retiring ccTLD be removed from the Root Zone less than 5 years from the date the IFO has sent the Notice of Removal (Subsection 4.2) to the retiring ccTLD Manager unless an alternate Retirement Date is mutually agreed to by both the ccTLD Manager and the IFO. If the Manager wishes to request an extension to the Default Retirement Date it must request this from the IFO as part of a Retirement Plan.

The IFO must remove a retiring ccTLD from the Root Zone no later than 10 years after having sent a Notice of Removal to the ccTLD Manager (“Maximum Retirement Date”).

4.4. Retirement Plan

After receiving a Notice of Removal the Manager must decide if it wishes to request an extension to the Default Retirement Date.

If the Manager of the retiring ccTLD does not wish an extension to the Default Retirement Date stated in the Notice of Removal it is expected, but not mandatory, that the Manager produce a Retirement Plan for the ccTLD which would typically include:

- A copy of the Notice of Removal;
• the date when the ccTLD is expected to stop taking registrations, renewals and transfers that exceed the date of removal from the Root Zone. It is important to note that there is a reasonable expectation that the date provided is the earliest practical date for implementing this; and

• details of a Communication Plan to advise the registrants of the Retirement of the ccTLD.

If the manager of the retiring ccTLD wishes to request an extension beyond the Default Retirement Date stated in the Notice of Removal it must produce a Retirement Plan which is acceptable to the IFO and is in accordance with the conditions listed below.

Granting an extension to the Default Retirement Date is at the discretion of the IFO and shall not be unreasonably withheld. The Reasonable Requirements Document that the IFO will have included with the Notice of Removal will describe the factors it will consider when evaluating a request for an extension to the Default Retirement Period.

A Retirement Plan which requests an extension shall include, in addition to the previously listed items, the following:

• The length of the extension requested (a maximum 5 additional years) including the proposed date of the removal of the ccTLD from the Root Zone;

• the reasons for requesting an extension; and

• an impact analysis which supports the reasons for making the extension request.

If the ccTLD Manager wishes to produce a Retirement Plan it must do so within 12 months of the IFO having sent the Notice of Removal to the Manager of the retiring ccTLD. At its discretion the IFO can extend the 12 month limit to a maximum of 24 months in total upon receiving a request for such an extension from the Manager. If the IFO grants such an extension it shall promptly notify the Manager of this.

If the ccTLD Manager submits a Retirement Plan to the IFO, the IFO shall provide a definitive response to the Manager regarding the request for an extension within 90 days of such a request having been received by the IFO.

The response by the IFO, if positive, shall state the length of the extension which has been granted. If the response is negative, the IFO shall include the specific reasoning for the refusal. The approval of an extension request shall not be unreasonably withheld.

If the request for an extension is rejected and the ccTLD Manager believes that the rejection is unreasonable or is inconsistent with the Reasonable Requirements Document it may appeal the decision by the IFO (see Subsection 5.2).

If the Manager of the retiring ccTLD and the IFO cannot agree on a Retirement Plan within 12 months, or up to a maximum of 24 months, if the IFO has granted such an extension, of the IFO having sent the Notice of Removal to the Manager, then the IFO shall promptly advise the Manager that the ccTLD shall be removed from the Root Zone 5 years from the date the IFO having sent the Notice of Removal to the Manager of the retiring ccTLD.

4.5. Exception Conditions

If the Manager becomes non-functional after a Retirement Plan is accepted, the IFO can use the same procedure outlined in the Requirements section to transfer the ccTLD to a new manager. In such cases the original timeline for retiring the ccTLD shall not change.
If the Manager breaches the Retirement Plan the IFO should work with the Manager to reinstate the Retirement Plan. If this is not possible the IFO can advise the Manager that it will maintain the Default Retirement Date from the Notice of Retirement.

5. Oversight & Review Mechanism

5.1. Oversight

This Policy is directed at ICANN and the IFO as the entity that performs the IANA Naming Functions with respect to ccTLDs.

This Policy is not intended and shall not be interpreted to amend the way in which ICANN interacts with the IFO and the delineation of their roles and responsibilities.

This Policy will not change or amend the role of the ICANN Board of Directors has with respect to individual cases of ccTLD Delegation, Transfer and Revocation, which is understood to be limited to a review to ensure that the IFO (staff) has followed its procedures properly. It is important to note that the IFO's decisions to:
- notify the ccTLD manager of the Retirement; and/or
- remove a ccTLD from the Root Zone
are out of scope for this Policy (see Section 2).

5.2. Review Mechanism

In this Policy on Retirement decisions have been identified which shall be subject to a review mechanism.

6. Stress Testing

6.1. Definition of Stress Testing

Stress testing is defined as:
- Test the process as developed by applying the process to “corner case” situations and understand whether such a case results in an unwanted outcome or side effects.
- If the outcome of that situation results in an unwanted outcome or side effects, adjust the Policy/Process if needed.

After completion of the draft process the stress testing was conducted through answering the following questions:
- What is outcome of this situation when the process is invoked?
- Is the outcome of that situation/the result unwanted or are side effects unwanted/unacceptable?
- Does the Policy/Process need to be adjusted/refined?
6.2. **Identified situations where adjustment/additional work may be needed**

The Working Group identified the following 16 situations:

1. **Significant name change of a country (resulting in a change of ccTLD).**
   
   Examples are:
   
   - ZR (Zaire) to CD (Congo, Democratic Republic of) (1997);
   - TP (East Timor) to TL (Timor-Leste) (2002)

2. **Domain Names under management at removal date.**
   
   At the agreed end-date (date of removal from the Root Zone), Second Level Domain Names (“SLD”) are still under management of the ccTLD Manager, despite reasonable efforts from the ccTLD Manager to end registrations.

3. **Breach of Retirement Agreement.**
   
   Various situations:
   
   - The ccTLD Managers continue to promote the ccTLD and accepts registrations during the Retirement process.
     
     Does it make a difference if at removal date there are no SLDs under management or the number of registrations under management has not declined or has even increased compared to the number at the date of Retirement Notification?
   
   - The ccTLD Manager stops all activities i.e. goes off-line.
   
   - The ccTLD Managers takes no action resulting in serious deterioration of the zone.

4. **The ccTLD Manager goes bankrupt after Notification of Retirement.**

5. **Request for Transfer after the Retirement Notice has been sent.**
   
   - Retirement is the result of significant name change;
   
   - Retirement is the result of dissolution of a country, significantly interested parties cannot be identified.

6. **The ccTLD Manager ends membership of the ccNSO and claims policies (for example Retirement and/or RFC1591/FOI) are therefore not applicable.**

   **Note:** The ccNSO Council recently established that membership of ccNSO ends by definition when the entity listed as ccTLD Manager is no longer listed as such in the IANA Root Database, implying that for the duration of the Retirement process the membership of the ccNSO does not end, unless it is actively terminated by the Manager.

7. **The Country Code was removed from the list of Assigned Codes because the country dissolved and the Code was re-assigned shortly afterwards (within 10 years) to another country added to the list.**

8. **There is uncertainty about authoritativeness of lines of communication between the ccTLD Manager and IFO.**

   The identity of authoritative entities are not clear during the process.

9. **Breach of Agreement due to conflicts of laws.**

   - Due to Court Injunction;
11. Island state disappears, but interests intend to keep ccTLD “alive”.
12. Unforeseen technical consequences, significant consequences or other affecting other TLDs or the DNS in general.
13. Country disappears, however there is a clear successor state
15. Assets of the ccTLD go to another party during the Retirement process.
16. Does the Retirement Policy apply to pending Retirement cases?

Each of these situations (1-16) was extensively discussed, and the discussion resulted in the need to include a specific mechanism of Transfer of a ccTLD post Retirement notice, for an expedient and “administrative” Transfer in order to ensure an orderly Retirement process. The results of the discussion and reference to the relevant section in the proposed Policy or other relevant policy document is included in the table Result of Stress Test per Identified Situation (see Annex A).

7. Process to Date

After the call for volunteers and appointment by the ccNSO Council of the members (see Annex C for the list of members, observers, experts and staff support) the ccPDP3 Retirement Working Group held its first conference call and commenced its work in June 2017. Since then the WG has met 61 times, of which 8 times were in person during ICANN meetings starting at the Johannesburg meeting in June 2017 (ICANN59) and 53 times through conference calls.

In the course of its work the original timeline and schedule as included in the Issue Report, was updated twice (March & December 2019).

The first work item the WG completed were the Rules of Engagement i.e the internal procedures for interaction and decision-making, which guided the activities of the WG members [4].

As of ICANN60 (in Abu Dhabi, United Arab Emirates) and at every following meeting the ccPDP3 Retirement WG informed the ccTLD community and members of the Governmental Advisory Committee present at the respective ICANN meetings about its progress.

At the Kobe meeting (ICANN64), the ccTLD Managers present expressed their initial support for the proposed method and process, including its proposed duration. At the Montreal meeting (ICANN66) the ccTLDs present expressed their support for the proposals with respect to the decisions that should be subject to oversight and the Review Mechanism.

At the Montreal meeting, the chair and vice-chair of ccPDP3 Retirement WG also conducted an extensive on-boarding session for members of the Governmental Advisory Committee.

### B. Overview of Terminology Used in the Context of Retirement of ccTLDs

#### B.1. IANA Naming Function terminology

Notes with respect to terminology in context of IANA Naming Function:

The column “Used in” refers to the ICANN Board and IANA reports relating to the ccTLD mentioned.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Revocation</td>
<td>The process by which the IANA Operator rescinds responsibility for management of a ccTLD from an incumbent manager.</td>
<td>Section 3.5 of RFC1591 [17]</td>
<td>Fol note: Section 3.5 of RFC1591 explicitly contemplates Revocation “in cases of persistent problems with the proper operation of a domain”.</td>
</tr>
</tbody>
</table>

#### B.2. Specific terminology derived from the ISO 3166 Standard

Notes with respect to the terminology in context of ISO 3166 Standard:

- In this overview a distinction is made between terminology defined in the Standard and the ISO Online Browsing Platform. The terminology defined in the Standard is included in the table in normal font. The terminology used in the Online Browsing Platform is emphasized.
- The PDP WG considers the Standard to be paramount. Terminology from the Online Browsing Platform is only included for informational purposes. It is strongly advised not to use or refer to the informational terms in Policy and policy related documents.
