

Agenda 13 May:

Please find the attached document ICANN-CCNSO-DRDWG-IssuesDetailedAnalysisV2-0BT, which will be the focus for our WG call this week. It's a fairly substantial document and needs some careful perusal, so I encourage reading sooner rather than later, and on-list debate as appropriate.

Notes on the new version:

- The document has some changes, reflecting a strengthening of the definition for a "policy change", and now provides for 4 tests instead of 3, which I think may be more robust.

- The methodology document and the supporting annexes are also updated to reflect this change.

- The updated methodology has been used against some of the relevant issues arising from the Issues List document (ICANN-CCNSO-DRDWG-IssuesListV1.2BT), with the focus on delegation, redelegation and retirement items, with the following included in the draft attached:

- RFC1591vsICP1 - 1 decision.
- RFC1591vsGAC P - no elements
- Generic Board decisions affecting DRR of ccTLDs - 2 decisions
- Delegation decisions - 1 decision
- Redelegation decisions - 3 decisions + 1
