Summary SECIR Working Group Telephone Conference
20 August 2014

The ccNSO working group "Secure Email Communication for cccTLD Incident Response" (SECIR) held its second conference call on Tue Aug 20.

We briefly reviewed the work we carried out since our last call, which consisted of a first analysis of (1) the pros and cons of several alternative designs for the two SECIR services (contact repository and secure messaging service) and (2) the possible technical components that we could use to implement them.

We will use this analysis to decide on a design for the SECIR services and how to implement them. We agreed that our analysis should be clear but concise as our goal is to have a working system at the end of this year.

To enable the community to follow the WG's design decisions and underlying rationale, we will document the analysis in the WG's final report and will report back to the community on our intermediate results at the ICANN meeting in Los Angeles. We will be using the time until the next call (Sep 2) to refine our analysis.
