

Notes SECIR Working Group Telephone Conference

4 November 2014

Attendees:

Cristian Hesselman, .nl (Chair)
Erwin Lansing, .dk
Frederico Newes, .br
Geng-Da Tsai, .tw (partly)

Staff:

Gabriella Schitteck

Apologies:

Abibu Ntahigiye, .tz

- The Chair ran through the actions – nr 6 (*“Ask OARC what possibilities there are to make changes to the OPS-TRUST system, to possibly avoid the requirement of using PGP Keys”*) and nr 15 (*“The Working Group Chair to incorporate the outcome of the OPS-Trust discussions into the final report document”*) are still to be completed.
- The group discussed the information that OARC had not yet access to the source code of the OPS-Trust platform. It was felt that the momentum of the work could be lost, if the group would just have to wait for it and an interim solution was sought.

Two alternatives were considered:

1) (“Plan B”) Set up a temporary ccTLD subgroup on the existing OPS-Trust platform - without customising it - and start working with that. Once DNS OARC has the source code it could move along to the new platform and do the necessary changes then.

It was pointed out that the community could possibly view the politics around such a solution as problematic, as individual people, not a company, run the OPS-Trust platform.

2) (“Plan C”) Implementing the contact repository as a mailman list, which regularly sends out the contact information of all ccTLDs subscribed to the list. This is a solution already provided by ISOC for their DNSSEC Deployment Maps service.

It was, however, pointed out that the latter solution would still require an operator.

The group considered the advantages and disadvantages of both alternatives and decided to pursue the first alternative, in case OARC could not provide the code in a timely manner. Only if that would prove to take too much time, “plan C” would be pursued.

ACTION 18: *Jacques Latour* to contact Keith from OARC, ask for his recommendation and opinion on contacting OPS-Trust operators regarding the possibility of providing a sub-group without customisation of OPS-Trust and how to organise this.

- In order to be prepared once the OPS-Trust platform is ready, the requirements, set out in Chapter 4 in the Final Report, need to be finalised.

ACTION 19: *Frederico Neves* and *Erwin Lansing* to review the requirements, as set out in Chapter 4 of the Final Report.

- ACTION 20: *Gabriella Schitteck* to send out a doodle poll for the next call of the SECIR Working Group to take place in the week 24-28 November 2014.
